Designed by LEVEL DESIGN AGENCY LTD for BB CONTRACTS

TYPOGRAPHY & DESIGN PRINCIPLES

Your site should feel like a room being refurbished, and brought to life. We will focus on elegant transitions, and movement, whilst ensuring it follows proven web design flows, whilst challenging conventional designs with something that feels warm, welcoming but also means business.

CHOSEN FONTS FOR THE DESIGNS

BB CONTRACTS WEBSITE HOMEPAGE 1.1

OXANIUM

Extra Bold

OXANIUM

Medium

In the first designs you will see we have used OXANIUM, a copperplate style lettering to symbolise strength, boldness, and timeless design. It's an open source typeface so it can be used freely. It comes with 7 font weight styles, for variety. We understand Trebuchet is your chosen font for branding, however we felt this would not stand out on this design, due to its slender form and rounded corners.

BB CONTRACTS WEBSITE HOMEPAGE 2.1

Trebuchet

All weights - paragraph font

To stay consistent with your branding,the second design used Trebuchet for the site design. It certainly compliments the white space style for this design, however Trebuchet is a document font, so we are suggesting considering a new font if you went ahead with this design, for all site titles. Pargraphs can stay in the Trebuchet font.

Side Note

We can look at other core typography options for the site, Google fonts has a large range of free fonts we can look at for web development.

WEBSITE DESIGN PRINCIPLES

BRANDING

Having studied your current branding, we wanted to stay consistent with the gold accenting, black background, and a mixture of sharp and round edges.
We have used the shape of the letter B, to create design assets used as backgrounds, as well as repeated use of a rectangle or square, to bring reference to your logo, but also the subtle idea of working in spaces, and filling that space with your work.

IMAGERY & VIDEO

You have plenty of images, and as mentioned in the proposal, we have reserved some of your budget, to consider videography and team photos, to add to the website. A video montage could really bring the main hero section to life, and we can develop this video over time, filming different projects and sites as the year goes along.

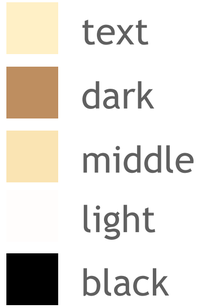

SECTION STRUCTURE

Each section will be crafted carefully, ensuring there is a balance of enough information, verses visuals, and that there is always a call to action.This includes, the repeated use of + which will add that label or sentence as a tag, to the tender builder,
thus allowing the visitor to build their custom inquiry and tender form at the end. Making the experience of surfing the site, easy and memorable, as well as maintaining your business goals of turning visitors into leads. We truly believe the tender builder will be a great addition.

WEBSITE DESIGN PRINCIPLES

COLOUR PALETTE

The colour palette should reflect BB Contracts' premium, confident and professional identity. Primary brand colours will establish visual consistency, supported by the carefully selected neutral tones and accent colours, that you have already supplied. Colour should be used with purpose, creating contrast, guiding attention and highlighting important elements without overwhelming the overall design.

SPACING & LAYOUT

A consistent grid and spacing system will create a balanced, structured and considered visual experience. Generous whitespace will allow imagery, typography and content to breathe, while carefully controlled margins, padding and alignment will establish rhythm and continuity throughout the website. Layouts should feel architectural, precise and uncluttered.

BUTTONS & CALL TO ACTIONS

Buttons should be distinctive, immediately recognisable and consistent with BB Contracts' visual identity. Primary and secondary actions will have a clear hierarchy, using considered typography, proportions and subtle interactive treatments. Hover animations may draw inspiration from the brand's geometric forms, creating memorable interactions without compromising clarity or usability.
